

Digital Asset

Capitalize on the next wave of digitization

with the leading platform for sophisticated, scalable blockchain applications

The challenge

Minimal innovation and outdated technology continue to introduce unnecessary risk and high operating costs to enterprises globally. Even the most forward-looking organizations are struggling to overcome near-universal challenges with legacy systems and infrastructure.

Fragile, rigid infrastructure

\$3 trillion is transacted daily via disconnected systems, leaving customers without shared, authoritative data

Poor communication

Fractured systems make interactions anything but seamless, resulting in manual reconciliation that introduces risk and unnecessary operating costs

Lack of privacy

Multiple parties need to control where data is stored and who has access to that information, and no public blockchain supports sub-transaction privacy

The business opportunity

Today's blockchains provide a partial solution to the problem of siloed data. However, boundaries remain between different blockchain deployments, and between blockchains and traditional IT systems. Few enterprises are effectively implementing blockchain solutions. Proofs-of-concept have dominated the hype, but these walled-garden installations often fail to realize full value.

Digital Asset is changing how businesses and markets interact

Digital Asset is a software company that modernizes legacy financial systems with Daml, our smart contract language, and Canton, our privacy-enabled blockchain. Together, this platform powers cutting-edge blockchain solutions, helping customers unlock new networks of value with sophisticated applications. Leading financial services, insurance, and healthcare organizations are partnering with Digital Asset to create new, multi-party applications that transform disparate silos into synchronized networks.

A global network of customers and partners

2014 DA Founded	200+ Employees	\$300M Capital Raised	24+ Projects completed
--------------------	-------------------	--------------------------	---------------------------

Momentum is building across a wide range of use cases and industries

- Asset tokenization
- Exchanges, clearing and settlement
- Custody and asset servicing
- Securities financing and collateral management
- Payments and central bank digital currency
- Healthcare, insurance, sports betting, energy and gaming

Digital Asset ensures your team has the industry expertise to build compatible solutions to legacy problems, along with the enabling technologies to scale your business needs.

Our industry-leading investors

Digital Asset

Benefit from the cutting-edge of smart contracts and blockchain applications

Daml, our core technology, is the leading platform for building and running sophisticated blockchain applications

Daml contains a smart contract language and runtime environment that defines and enforces the schema, semantics, and execution of transactions between parties. Daml applications run on Canton, a scalable, privacy-enabled blockchain. Daml applications running on one Canton blockchain are composable, meaning they can connect and transact with Daml applications running on separate Canton instances.

Daml is the blockchain technology of choice across industries

With Daml, enterprises can create multi-party solutions that transform disparate silos into synchronized networks, eradicating latency and errors by guaranteeing consistent data. Different parties—from teams within a single business to separate organizations—share a real-time understanding of transactions. This eliminates duplicate processing and manual reconciliation, provides reliable data and audit trails, and creates a foundation for innovation.

Join a growing digital network of new market services

Goldman Sachs

Goldman Sachs is using Daml for its E2E digital asset platform taking bond issuances from T+5 to T+0 at speeds of sub 60 secs

clearstream | DEUTSCHE BÖRSE GROUP

Clearstream has created a fully compliant, DLT-ready platform enabling same-day-issuance

HKEX
香港交易所

HKEX is putting Daml to work in its post-trade processing for its Stock Connect platform

Xpansiv

Xpansiv is creating a multi-tenant marketplace for new data-driven and ESG-inclusive commodities products

“Clearstream took registration down from 3 days to 9 minutes and even those 9 minutes are because we left some manual process there which we will remove. This has significant positive financial outcome for our clients.”
